

# **Learnable 21:Backend**

## **Standardization Test Exercise**

# Central Bank of Learnable

## Overview

Congratulations! The year is 2022 and you have been given a job as a backend developer with the team at Genesys Devstudio.

## Problem Statement

The Central Bank of Genesys is trying to set up a platform for their banking service to make online banking seamless for their customers. You're therefore given a task to setup a basic banking API service with the following features:

### Users can:

- Login
- Deposit money
- Withdraw money
- Transfer funds to other users
- See a list of their transactions

### Admin can:

- Add users
- Delete users
- Reverse transactions(transfer)
- Disable a user's account
